The following <u>Listing of the Claims</u> represents all the pending claims in the present application:

Listing of The Claims:

- 1. A composition for identifying a nucleotide at a predetermined position of a target polynucleotide in a sample, said composition comprising:
- (a) an oligonucleotide primer comprising a first sequence which hybridizes to said target polynucleotide immediately 3' of said nucleotide, and a second sequence which does not hybridize to said target polynucleotide in the presence of a third sequence; and
- (b) an oligonucleotide probe comprising said third sequence which hybridizes to said second sequence of said oligonucleotide primer, said oligonucleotide probe labeled with a first member of a pair of interactive labels.
- 2. The composition of claim 1, further comprising a first polynucleotide chain terminator, which is incorporated in a template-dependent manner into said oligonucleotide primer by a polynucleotide synthesis enzyme.
- 3. The composition of claim 2, further comprising one or more of a second, a third and/or a fourth polynucleotide chain terminator, wherein said first, second, third and fourth polynucleotide terminators are not identical.
- 4. The composition of claim 2, wherein said first polynucleotide chain terminator is labeled with a second member of said pair of interactive labels.
- 5. The composition of claim 4, wherein said first and second members of said pair of interactive labels interact with each other to generate a signal by fluorescent resonance energy transfer.
- 6. The composition of claim 1, further comprising a template-dependent polynucleotide synthesis enzyme for incorporating in a template-dependent manner a complementary polynucleotide chain terminator into said oligonucleotide primer.

7. The composition of claim 6, wherein said polynucleotide synthesis enzyme is a JDF-3 DNA polymerase.

- 8. The composition of claim 2, wherein said oligonucleotide primer comprises a separation moiety that permits separation of said oligonucleotide primer and/or said oligonucleotide probe hybridized to said primer from unincorporated polynucleotide chain terminator, and oligonucleotide probe which is not hybridized to said oligonucleotide primer.
- 9. The composition of claim 8, further comprising a target moiety specific for said separation moiety, wherein said separation moiety binds to said target moiety to permit said separation.
- 10. The composition of claim 9, wherein said target moiety is attached to a solid support.
- 11. The composition of claim 4, wherein said first and second members of said pair of interactive labels are fluorescent molecules which interact with each other to generate a signal by fluorescent resonance energy transfer.
- 12. A composition for identifying a nucleotide at a predetermined position of a target polynucleotide in a sample, said composition comprising:
- (a) an oligonucleotide primer comprising a first sequence which hybridizes to the target polynucleotide immediately 3' of said nucleotide, and is covalently attached to a tag molecule; and
- (b) an anti-tag molecule which binds to said tag molecule, said anti-tag molecule labeled with a first member of a pair of interactive labels.
- 13. The composition of claim 12, wherein said tag molecule is located on the 5' terminal of said oligonucleotide primer.
- 14. The composition of claim 13, wherein said tag molecule is a first member of a specific binding pair which comprises said first member and a second member.

Page 7

15. The composition of claim 14, wherein said anti-tag molecule is said second member of said specific binding pair.

- 16. The composition of claim 15, wherein said specific binding pair is a biotin-streptavidin pair.
- 17. The composition of claim 1, wherein said second sequence is at the 5' terminal of said first sequence.
- 18. The composition of claim 1, further comprising a labeled conventional deoxynucleotide, and the other three unlabeled chain terminators, wherein said labeled conventional deoxynucleotide is incorporated into the oligonucleotide primer at a position corresponding to the predetermined nucleotide of the target polynucleotide.
- 19. The composition of claim 1, wherein one member of the pair of interactive labels is a quencher molecule.
- 20. A kit for identifying a nucleotide at a predetermined position of a target polynucleotide in a sample, said kit comprising:
- (a) an oligonucleotide primer comprising a first sequence which hybridizes to said target polynucleotide immediately 3' of said nucleotide, and a second sequence which does not hybridize to said target polynucleotide in the presence of a third sequence;
- (b) an oligonucleotide probe comprising said third sequence which hybridizes to said second sequence of said oligonucleotide primer, said oligonucleotide probe labeled with a first member of a pair of interactive labels; and
- (c) packaging materials therefore.
- 21. The kit of claim 20, further comprising a polynucleotide chain terminator, which can be incorporated in a template-dependent manner into said oligonucleotide primer by a polynucleotide synthesis enzyme.

Page 8

22. The kit of claim 21, further comprising one or more of a second, a third and/or a fourth polynucleotide chain terminator, wherein said first, second, third and fourth polynucleotide terminators are not identical.

- 23. The kit of claim 21, wherein said polynucleotide chain terminator is labeled with a second member of said pair of interactive labels.
- 24. The kit of claim 20, further comprising a template-dependent polynucleotide synthesis enzyme for incorporating in a template-dependent manner a complementary polynucleotide chain terminator into said oligonucleotide primer.
- 25. The kit of claim 24, wherein said polynucleotide synthesis enzyme is a JDF-3 DNA polymerase.
- 26. A kit for identifying a nucleotide at a predetermined position of a target polynucleotide in a sample, said kit comprising:
- (a) an oligonucleotide primer comprising a first sequence which hybridizes to the target polynucleotide immediately 3' of said nucleotide, and is covalently attached to a tag molecule;
- (b) an anti-tag molecule which binds to said tag molecule, said anti-tag molecule being labeled with a first member of a pair of interactive labels; and
- (c) packaging materials therefore.
- 27. The kit of claim 26, wherein said tag molecule is a first member of a specific binding pair which comprises said first member and a second member.
- 28. The kit of claim 27, wherein said anti-tag molecule is said second member of said specific binding pair.
- 29. The kit of claim 28, wherein said specific binding pair comprises a biotin-streptavidin pair.

Claims 30-54 are withdrawn from consideration.
